Description

I have recently installed a Debian 32bit locally on a virtual machine.

Installed the following libraries system-wise:
- cfitsio
- root
TASImage plugin package it is not available under debian because of a license issue.
Pratically, root develpers has copied afterimage library sources without including/handling their license.
See http://bugs.debian.org/cgi-bin/bugreport.cgi?bug=682059.
- Ice

Tested the QL_PDHU_SA quick look and it works without using environmental variables (except for INSTALL_DIR and SOURCE_DIR).
